CoSign Digital Signatures

The Digital Advantage

Organizations that work out how to get the right information to the right people in less time will win new customers, streamline operations and gain competitive advantage. Executives who seek an advantage from digital adoption are automating business processes and document management without delay, creating a business 'Autobahn'.

No Stops on the Autobahn

One task often ignored or delayed is turning signed documents into electronic records that can feed business processes. Industry analysts establish that greater than 75 percent of business processes depend on forms. Companies make sizeable investments to automate their business processes to accelerate growth, meet regulatory compliance, and eliminate operational inefficiencies. Still, firms continue to print out paper forms to be manually sent, signed and stored. That's like putting stoplights on the Autobahn. It brings efficient running businesses to a grinding halt and increases operating costs.

A better way

CoSign® is a digital signature solution that takes a better approach. By embedding the standard signature technology directly into mainstream business applications, CoSign makes it easy to digitally sign transactions, documents and records. CoSign embeds a signature record that travels with the document for every signature it captures. This Portable Signature Format (CoSign PSF™) allows anyone to seamlessly verify and retain proof of identity, intent, and document integrity without costly, complicated, or proprietary software. As a result, CoSign keeps your business running smoothly by fully automating and quickly scaling processes at a low cost and with proper controls.

Seamless Digital Signatures

Companies using CoSign digital signatures find it easy to fully automate their business processes with the necessary controls to secure transactions and to comply with regulations. With extensive application support and a centralized approach that allows for rapid deployment, CoSign lowers operating costs with little disruption. CoSign *keeps your business moving* and makes it easy for business to be done electronically from anywhere.

CoSign Business Benefits

A Simple Click. CoSign makes it easy to sign, verify, and retain digital records because the digital signature standard is already built into applications like Microsoft® Word, Excel®, SharePoint®, Outlook®, Adobe® Reader®, Acrobat®, AutoCAD®, IBM Lotus®, Oracle UCM, and Lawson M3, among others. Because of this, CoSign users simply sign with one click using familiar applications. Furthermore, users can verify the record with off-the-shelf applications from most major software vendors. This speeds adoption and scaling of business processes that include digital signing as a routine practice.

A Faster Pace. CoSign accelerates the pace of doing business electronically with customers, partners, and prospects by sharing quick, easy, and secure transactions and records between firms and across geographies. CoSign is convenient and handles high-volume transactions for any size business with ease. CoSign PSF is based on industry standards and boasts technical compatibility with a broad set of applications to guarantee electronic signature records can be easily read and verified for decades.

A Lower Cost. CoSign takes a centralized approach to deployment and administration of signature credentials. All signature keys and credentials are stored on a central server and accessed securely over the network. The software seamlessly installs under an organization's existing user-management directories, authentication schemes, and application infrastructure reducing the cost of administration to almost nothing.

The nature of a CoSign deployment is installation and configuration, and not system integration. Therefore, CoSign typically installs in less than half a day, giving thousands of signers the ability to start digitally signing immediately. The centralized approach reduces the cost of signing and authorizing transactions and affordably completes any investment in automation. CoSign typically costs 70 percent less than alternative offerings and also lowers the costs of archiving, audits, and legal challenges. Simply put, CoSign eases the cost and burden of using digital signatures in business process automation.

Technical Specifications

Application Support

Adobe Acrobat 6/7/8/9
 Adobe Livecycle
 Adobe Reader 6/7/8/9
 AutoDesk AutoCAD 2000 and higher
 Corel WordPerfect
 Crystal Reports
 HTML Files
 IBM Lotus Forms
 Lotus Notes
 Microsoft BizTalk
 Microsoft Word 2000/XP/2003/2007
 Microsoft Excel 2000/XP/2003/2007
 Microsoft InfoPath 2003/2007
 Microsoft Outlook
 Microsoft Outlook Express
 Microsoft Power Point XP and higher
 StarOffice/OpenOffice Writer
 StarOffice/OpenOffice Calc
 TIFF
 Web applications
 XML documents
 Any application that uses MS CAPI, PKCS#11 or JCA for signing
 Any application that can print (via OmniSign)

Document Management Systems Support

Cerenade Visual eForms
 DocuWare
 FileNet (IBM) eForms
 eDocs (Hummingbird/Open Text)
 IBM SCORE
 Laserfiche
 Lawson S3 and M3
 Microsoft SharePoint Server 2003 / 2007
 NextDocs
 Oracle UCM
 Xerox DocuShare

Signature Features

Worldwide Verifiable
 Multiple Signatures per Document
 Graphical Signatures
 Multiple Graphical Signatures per User
 Sectional Signing (Word and Excel)
 Unattended and Batch Signing
 Audit Trail
 Secured Time Stamp

Certification Authority Support

CoSign Internal CA
 Subordinate to an existing CA
 External CA
 Web-trusted CA service

Authentication Methods

User Name/ Password
 One-Time Password (OTP) (e.g., RSA, Vasco, Aladdin, Cidway)
 Tokens (Smart Cards, USB-based security tokens)
 Biometric (Saflink, DigitalPersona)
 RADIUS-based authentication

Supported APIs

Microsoft CAPI
 PKCS#11
 JCA/JCE
 CoSign Signature API (SAPI)
 Web Services (compliant to OASIS DSS, Adobe Roaming ID, and SPML)

User Directories

Microsoft Active Directory
 Novell eDirectory
 Oracle Internet Directory (OID)
 IBM Tivoli
 LDAP-based Directories
 Directory Independent Installation
 Sun Directory Services

Security Standards

FIPS 140-2 Level 3 validated appliance available (see www.nist.gov for latest validated CoSign versions)
 FIPS 186-2
 ETSI TS 101 733
 Appliance with Common Criteria EAL 4+ CWA 14169 certified signing components available

Regulation Compliance

FDA Title 21 CFR Part 11
 Health Insurance Portability and Accountability (HIPAA)
 Sarbanes Oxley
 EU VAT Directive
 SAFE BioPharma Association
 United States Department of Agriculture (USDA)

Other

High Availability
 Load Balancing

Physical Dimensions (2 options)
